## Robb Report Magazine Chooses Converging System Inc. Customer for “Best of the Best: 2005 Entertainment Award”

### **CONVERGING SYSTEMS’ INTELLIGENT MOTOR CONTROLLER, “THE B.R.I.C.” FORMS CORE OF STEWART FILMSCREEN’S ‘DIRECTOR’S CHOICE SCREEN MASKING SYSTEM’**

Los Angeles, CA January 15, 2006 ---Converging Systems Inc., a California-based technology company, announced today that its technologies and products have once again been recognized for innovation and differentiation among thousands of products in the entertainment industry. The Robb Report in their “Best of the Best 2005: Entertainment” recognized a Converging Systems’ customer, Stewart Filmscreen Corporation, for its innovative screen masking system. The Robb Report reported on this achievement in its June 1, 2005 edition of its internationally distributed high-end target magazine. A custom designed integrated control technology known as the B.R.I.C.™ developed by Converging Systems for Stewart Filmscreen’s award winning “Director’s Choice Screen Masking System” forms the electronics core for this world-class projection screen product. The B.R.I.C. is a bi-directional, multi-aspect ratio, home-automation compatible multiple motor controller which is integrated within the Director’s Choice Projection Screen System.

Recognition by the Robb Report of the Screen Masking System component of the “Director’s Choice” projection screen product is an exciting accomplishment of our team,” said Craig Douglass, President and CEO of Converging Systems. “We think that the multi-

BEST OF THE BEST: 2005 ENTERTAINMENT CATEGORY (2 of 2)**

aspect ratio Screen Masking System adds a great value and differentiation to the Stewart product in addition to enhancing the function and usability of the world-class Stewart projection screen system. Stewart Filmscreen occupies an unparalleled position in the industry for this type of product innovation and offering.

According to the Mike Wood, an editor to the Robb Report, "The shapes of movies are as varied as the cinematographers who film them, and almost all are different from standard or high-definition television screens. Stewart Filmscreen has devised a masking solution that enables the viewing of films without the black bars that have become ubiquitous. While masking systems have existed for some time, none has operated as precisely and as effortlessly as the Stewart Director's Choice system. At the touch of a button, black masking panels perfectly crop any image, and when integrated with the data from DVD storage systems such as the Kaleidescape Media server or ReQuest's Video ReQuest DVD changer controller, the curtains can automatically close precisely to the edges of the on-screen image. This system is a must for any high-end home theater."

**About Converging Systems**

Converging Systems Inc. is an innovator in technical product development. It designs and manufactures Knowledge-Based Interactive Technology kiosk systems, embedded control systems and other customized technology-oriented products for major OEM customers. The firm assists its customers in bringing together the latest reliable technologies that integrate Converging System's technologies with customer's knowledge-based assets—its name, its product knowledge and its people---to leverage science, technology and information. performance and exceptional customer service.

For more information on the company's line of interactive kiosk products and its other OEM technology products, please call (310) 544-2628 or visit [www.convergingsystems.com](http://www.convergingsystems.com).
